

To ensure your equipment remains in specification throughout its life, Martindale offers a calibration service on all equipment. In the unlikely event of your tester failing, Martindale also offers a full repair service to restore your instrument to its original specification.

All Martindale products can be supplied with calibration certificates. Centralised computer driven procedures ensure a consistent repeatable approach. Centralised records also allow us to maintain traceability and to generate reminders for recalibration when next due.

Martindale offers a full and comprehensive test equipment repair and calibration service for Martindale and most other manufacturers' equipment, many on a fixed price basis.

What is the turnaround on calibration?

For our standard service we quote a 5 working day turnaround but it is very often less. Our premium FAST 24 Hour calibration allows you to drop your meter off at our premises and collect the next working day. Alternatively send the unit to us and we will send it back to you on a next day carrier. Additional charges apply. Next day delivery is not available for specialist testers and turnaround times may vary.

What other expedited services are available?

A chargeable collection service is available and goods can be collected & returned by a next day courier service. For very urgent requirements we are able to offer a same day service for standard test equipment providing you can deliver to and collect from our premises in Watford, surcharges apply.

Where can I get more information?

For more information on repair and calibration services please call our service department on 01923 441717 or email: service@martindale-electric.co.uk

You can also view full details and request a quotation by visiting: <https://martindale-electric.co.uk/service-centre/>

Although we specialise in electrical test equipment calibration, we also calibrate:

- Thermometers
- Cable fault locators
- Anemometers
- Process control calibrators
- Light meters
- Oscilloscopes
- Pressure measurement instruments
- Microwave leakage detectors
- Gas detectors
- Tachometers
- Sound meters

Are all your meters calibrated when first sold?

As part of the manufacturer's process, all equipment goes through a series of tests including calibration. However certificates are not provided for all products.

How often should I get my meter calibrated?

Only you can decide this based on your environment and the consequences of errors. However most people get their meters calibrated every 12 months.

Does Martindale repair other companies' instruments?

Yes, with a fixed charge repair scheme for many models.
